Formula for Calculating Air Treatment Times

Calculate Area to be treated-
 Square Ft. x Height of Room = Cubic Ft.
 Cubic Ft. divided by Cubic Feet per Minute (CFM rating of unit)
 Minutes divided by 60 = Hours to turn air in room over 1 time*

Example For Model 1000

10'L x 12' W x 8' H room =960 cu Ft
 960 cu ft divided by 45 cfm = 21 min to turn room air over 1 time

***RGF suggests 3 turnovers of room volume for complete treatment**

The amount of time necessary to treat an area with advanced oxidation and ozone depends upon the temperature, humidity level and the amount of reactive substances (odors).
